STRATEGIC PARTNERSHIPS: PRODUCTS AND MARKETS

RECEPTORS' products are built on our patented CARA™ AFFINITY by DESIGN™ synthesis technology that enables us to modify virtually any surface to produce SMART MATERIALS™ products.

Our technology development focus has been on market needs in the broad areas of:

- disinfection and infectious disease control for clinical, agricultural and household environments.
- sampling and sample preparation for infectious disease detection and diagnostics in human and agricultural samples.
- diagnostic tools for the identification and validation of disease biomarkers.
- chemical sensors for clinical and industrial use.

Our product development program has focused on specific commercial opportunities based on our ACTIVEcapture™ technology:

- **wipe, filter and mask products** that capture infectious bacteria and viruses from surfaces, liquids and air for infectious disease control.
- **filter and magnetic media products** that capture microbes for detection and diagnostic sampling and sample preparation.
- **separation media products** for blood and tissue proteins that are clinical biomarkers for disease diagnostics.
- **implantable glucose sensing system** for diabetes management.

Additional information on these product and commercialization opportunities can be found on our website, www.receptorsllc.com, or by contacting us at info@receptorsllc.com. We look forward to working with you to solve your product and market development needs.
